

LAB EXERCISE 1_7

NAME: M.SAI HARSHITHA

REG.NO:192424408

COURSE CODE: ITA1425

COURSE NAME: ETHICAL HACKING

1. rm, users, tree

AIM

To execute and display the results of rm, users, and tree commands in Kali Linux.

ALGORITHM

1. Open the Kali Linux Terminal.
2. Create a sample file using the touch command.
3. Use the rm command to remove the sample file.
4. Use the users command to display the users currently logged into the system.
5. Use the tree command to display the directory structure.
6. Observe the output displayed by each command.
7. Verify that the commands execute successfully.

```
labex:project/ $ users
```

```
labex:project/ $ touch testfile.txt
labex:project/ $ rm testfile.txt
labex:project/ $ ls
labex:project/ $
```

```
labex:project/ $ tree
.
0 directories, 0 files
```

2. less, more, vi

AIM

To execute and display the results of less, more, and vi commands in Kali Linux.

ALGORITHM

1. Open the Kali Linux Terminal.
2. Create or select a text file containing some data.
3. Use the less command to view the file page by page.
4. Use the more command to view the file sequentially page by page.
5. Use the vi command to open the file in the Vi editor.
6. View or modify the contents of the file using Vi.
7. Exit the editor and verify the changes made to the file.

```
labex:project/ $ users
labex:project/ $ tree
.

0 directories, 0 files
labex:project/ $ t1 testfile.txt
zsh: command not found: t1
labex:project/ $ touch testfile.txt
labex:project/ $ rm testfile.txt
labex:project/ $ ls
labex:project/ $
```

```
labex:project/ $ echo -e "Line 1:Welcome to Kali Linux\nLine 2:Security Testing\nLine 3:Penetration Testing\nLine "> example.txt
labex:project/ $ ls
example.txt
labex:project/ $ less example.txt
labex:project/ $
```

3. tree, head, tail

AIM

To execute and display the results of tree, head, and tail commands in Kali Linux.

ALGORITHM

1. Open the Kali Linux Terminal.
2. Navigate to the required directory.

3. Use the tree command to display the directory structure.
4. Select a text file containing multiple lines of data.
5. Use the head command to display the beginning lines of the file.
6. Use the tail command to display the ending lines of the file.
7. Observe and verify the output of all three commands.

```
labex:project/ $ tree
.

0 directories, 0 files
labex:project/ $ head -q -n 3 /etc/password
head: cannot open '/etc/password' for reading: No such file or directory
labex:project/ $ head -q -n 3 /etc/passwd
root:x:0:0:root:/root:/bin/bash
daemon:x:1:1:daemon:/usr/sbin:/usr/sbin/nologin
bin:x:2:2:bin:/bin:/usr/sbin/nologin
labex:project/ $ tail /etc/passwd
usbmux:x:107:46:usbmux daemon,,,:/var/lib/usbmux:/usr/sbin/nologin
rtkit:x:108:113:RealtimeKit,,,:/proc:/usr/sbin/nologin
avahi:x:109:114:Avahi mDNS daemon,,,:/run/avahi-daemon:/usr/sbin/nologin
saned:x:110:117:./var/lib/saned:/usr/sbin/nologin
colord:x:111:118:colord colour management daemon,,,:/var/lib/colord:/usr/sbin/nologin
pulse:x:112:119:PulseAudio daemon,,,:/run/pulse:/usr/sbin/nologin
labex:x:5000:5000:./home/labex:/usr/bin/zsh
mysql:x:113:122:MySQL Server,,,:/var/lib/mysql:/bin/false
mongodb:x:999:999:./home/mongodb:/bin/sh
redis:x:114:123:./var/lib/redis:/usr/sbin/nologin
```

4. ls, cat, mkdir

AIM

To execute and display the results of ls, cat, and mkdir commands in Kali Linux.

ALGORITHM

1. Open the Kali Linux Terminal.
2. Use the ls command to list the files and directories.
3. Use the mkdir command to create a new directory.
4. Use ls again to verify the newly created directory.
5. Create or select a text file.
6. Use the cat command to display the contents of the text file.
7. Observe and verify the output of all commands.

```

labex:project/ $ ls -l
labex:project/ $ ls -l
total 0
labex:project/ $ cat notes.txt
cat: notes.txt: No such file or directory
labex:project/ $ mkdir PenTest_Report
labex:project/ $ ls
PenTest_Report
labex:project/ $ echo "Target IP: 192.168.1.45" > PenTest_Report/notes.txt
labex:project/ $ cat PenTest_Report/notes.txt
Target IP: 192.168.1.45
labex:project/ $ █

```

5. uptime, date, mv

AIM

To execute and display the results of uptime, date, and mv commands in Kali Linux.

ALGORITHM

1. Open the Kali Linux Terminal.
2. Execute the uptime command to display system running time and system load.
3. Execute the date command to display the current date and time.
4. Create a sample file using the touch command.
5. Use the mv command to move or rename the sample file.
6. Use ls to verify the new location or name of the file.
7. Observe and verify the results of all commands.

```

labex:project/ $ uptime
19:50:33 up 144 days,  8:40,  0 users,  load average: 0.82, 0.49, 0.39
labex:project/ $ date
Sun Oct  4 19:50:45 CST 2026
labex:project/ $ mv
mv: missing file operand
Try 'mv --help' for more information.
labex:project/ $ touch old.txt
labex:project/ $ mv old.txt new.txt
labex:project/ $ ls
PenTest_Report  new.txt
labex:project/ $ █

```

6. touch, pwd, wget

AIM

To execute and display the results of touch, pwd, and wget commands in Kali Linux.

ALGORITHM

1. Open the Kali Linux Terminal.
2. Execute the pwd command to display the current working directory.
3. Use the touch command to create a new empty file.
4. Use ls to verify that the file has been created.
5. Use the wget command with a valid URL to download a file.
6. Use ls to verify the downloaded file.
7. Observe and verify the output of all commands.

```
labex:project/ $ touch file.txt
labex:project/ $ ls
PenTest_Report  file.txt  new.txt
labex:project/ $ pwd
/home/labex/project
labex:project/ $ wget https://example.com/
--2026-10-04 19:54:11-- https://example.com/
Resolving example.com (example.com)... 104.20.23.154, 172.66.147.243, 2606:4700:10::6814:179a, ...
Connecting to example.com (example.com)|104.20.23.154|:443...
```

7. cd, cp, ls

AIM

To execute and display the results of cd, cp, and ls commands in Kali Linux.

ALGORITHM

1. Open the Kali Linux Terminal.
2. Use the pwd command to identify the current working directory.
3. Use the cd command to change to the required directory.
4. Use the ls command to display the files and directories.
5. Select a file to be copied.
6. Use the cp command to copy the file to another location or with another name.
7. Use ls to verify that the copied file exists.

```
labex:project/ $ cd -  
~/project  
labex:project/ $ pwd  
/home/labex/project  
labex:project/ $ touch original.txt  
labex:project/ $ cp original.txt copy.txt  
labex:project/ $ ls  
copy.txt  original.txt  
labex:project/ $ ls  
copy.txt  original.txt  
labex:project/ $ █
```
